The Advantages of this Catalog

It is easy. Sit back in comfort and take your time. Faithful pictures, honest descriptions, exact specifications all tell **MORE** about a plant than looking at it does. Order as soon as you wish, we ship at proper planting time. Our liberal guarantee and eighty-year reputation make it safe to order this way. Most large wholesale ordering is by mail.

It is more fun, since new and rare varieties are far sooner available from catalogs than in local sales yards. Our enormous selection offers hundreds of kinds more than local nurseries can. You get better varieties that are more exciting too.

It is the best way to plan properly. No sales talk, but real information on shade, acidity, moisture, etc. Mark out at leisure where each plant you want grows best in your garden conditions. Result, better growth and far less work.

Ninety percent of our shipments are by express, but we do ship by mail where possible. Unlike most other nurseries, however, stock is not shipped from the wholesale growers to a central packing plant or display center. It is shipped direct from growing fields to YOU. Therefore (1) our stock is usually fresher; (2) costs average less; (3) very many more kinds can be offered this way.

We have thousands of satisfied customers, and more every year. Many write enthusiastic letters. But, if anything goes wrong, we try to be more than fair. We will never be perfect in this world, but we do try hard to furnish only good stock.

P. S.—The worst drought in eastern U. S. weather history was late last May. Our guarantee (see next page) still applies on any losses the first season.

	Quantity	NAME OF PLANT	Size	Amount
<p>Handling fee (if order is \$2.50 or less)</p>				

Fill in the order form and enclose check. Shipment is made with express charges collected on arrival. You will get a prompt acknowledgment indicating approximate shipping time.

Unlike other things you buy, nursery stock must be ordered in advance—Why? Because our whole year's shipments come in a few months' time and there is never enough help. Shipments are scheduled long in advance. Order now, we will ship at proper time later.

PRICES—Net at the nursery. Transportation to be added at actual cost. Usually 5 sold at rate per 10, 50 at 100 rate.

PACKING COSTS—Free if Cash accompanies order, except stock dug with a ball of earth. Otherwise, packing is charged at cost (usually 10% of cost of stock). Balled, heavy evergreens: we will estimate costs in advance if you wish.

LIMITED RESPONSIBILITY — We disclaim responsibility for any reason in amounts greater than invoiced.

CLAIMS for errors, shortages or other causes must be made within 10 days.

We will allow a credit of 50% of the catalog value of any stock that dies the first year. Credit to be used on future orders as you wish. We also guarantee 100% safe, satisfactory arrival—but you must report trouble within 10 days.

that will in a few years, with little care, be \$25 specimens. Do not wait until you need large trees in a hurry, but look ahead 5 or even 10 years hence.

The plan shows a corner of a lot using a 9 by 12 foot area for a nursery—no more space than used by a small specimen tree. The shrubbery masks the area. Exposure is planned as if north were at the top—but any exposure would do, locating the Lath Screen in shady spot.

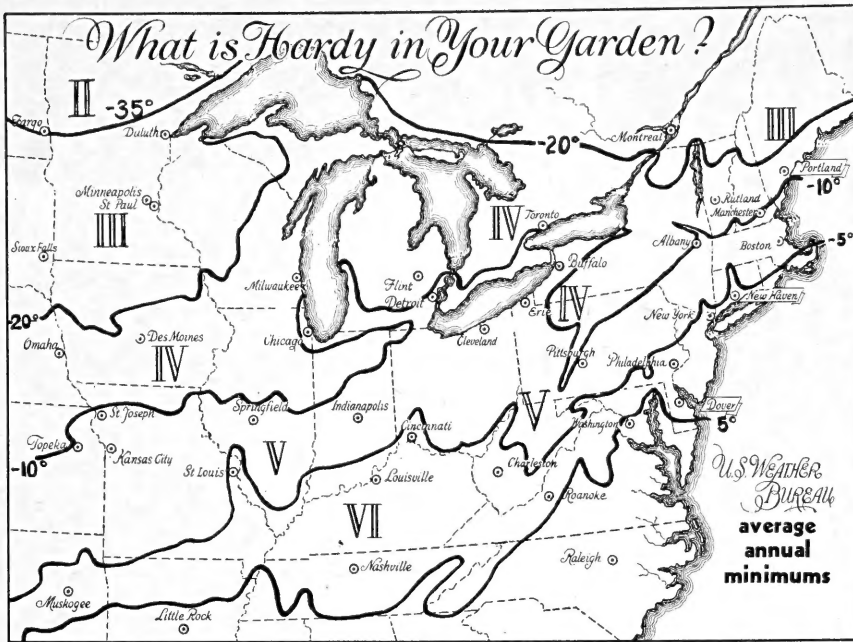

Lath Screen sketched below is very important for young plants the first summer. Simply built of ordinary lath and a few nails. Screen is rested on the posts.

Soil Preparation

The lath-house soil should be sandy loam with an original dressing of 3 inches of manure worked on to a spade depth. The nursery itself can be heavier soil, but requires manure as well. Avoid lime.

Heel-in Area. Even a tiny spot kept free for this purpose, enables one to temporarily plant a shipment of plants the day received. They can safely remain for weeks if need be before permanent planting. Water well.

CLIMATE MAP

The numbers I to VII in the map refer to Zone numbers printed after each plant name throughout this Guide. It shows the northern limit beyond which any given plant cannot grow. This is not a perfect rule. Two modifications might be mentioned. East of Indianapolis, a damper climate makes all evergreens hardier. West of Indianapolis hot western summers make deciduous trees hardier than rated in this Guide.

IN THIS SHORT GUIDE it is taken for granted that most trees and shrubs require normal food, air and water. Thus a plant needing more air than usual at its roots is marked "loose soil" or "drain". Plants very easy to grow are referred to as "tolerant" or may have no notes whatsoever.

Light — "sun", "shade".

Light makes the chlorophyl factory turn its wheels. All plants need some. Those that get along best on little light are marked "shade" in this Guide. Those that need a great deal are marked "sun".—Normal plants are not marked.

Air — "loose", "heavy", "drain".

Roots get oxygen from air that filters into the earth. Some plants need more than others; these must have loose soil and will suffocate in heavy damp clays. Such plants are marked "drain".

Water — "damp", "dry".

Roots can only use chemicals that are dissolved in water. Also, water is the means of transportation up the stem. Some plants need more than others and die in severe drought. In the descriptions such are marked "damp". A loose soil quickly dries, a heavy soil keeps damp. Thus water and air for the roots are both present in a mixed soil.

Food — "humus", "rich", "barren".

- Potassium**—most soils have plenty.
- Phosphorus**—needs to be added in most soils with fertilizer.
- Nitrogen**—Fertilizer supplies it, but water quickly leaches it out, so permanent plants depend on bacteria in the soil. These bacteria depend on:—

1. Acidity of soil (lime, etc.).
2. Drainage of soil (air).
3. Humus in the soil (food).

A—Seedlings or Rooted Cuttings

Must be shaded first two years. Planted 2 in. x 2 in., lath-house holds 432. After two years, must be transplanted into next grade.

B—Once Transplanted Grade

Grown as above, or bought. (Our 2 yr. and 3 yr. Azaleas, e.g.) Space about 5 in. x 5 in. (80 in the lath-house pictured). Shaded first year, but the second year shade omitted except in drought. In 2 years, now twice transplanted ("XX"), usable as hedge plants, for bedding, etc.

C—Twice Transplanted Grade

Can be moved into open, spaced 9 in. x 9 in. (nursery pictured holds 104) and left two years. They are 'shaped,' straggly branches lopped off with sharp knife. Cultivate, fertilize, water, no shade needed. After 2 years, they are XXX (three times transplanted), bushy and shapely.

D—Specimens

Every garden needs some larger, well formed plants. Such specimens are grown 2 or more years spaced 18 in. x 18 in. (nursery pictured holds 32).

On the following pages are arranged alphabetically the really choice, showy Evergreen Shrubs. No plants in gardens are easier to care for, once planted on suitable sites. Their very name tells the treatment: Broad evergreen leaves transpire water constantly, so extra moisture is needed when planting and all year. Mulching with peat helps conserve soil moisture. All easy to grow—Acid-soil kinds, however, **must** have acid soil.

PLANTING

- No fertilizer—little or no pruning.
- Mulch with leaves after planting.
- Water Well.

Rhododendron culture

1. Culture: acid, damp loose soil.
2. The roots feed at the surface — do not hoe or rake. Plant them properly and thereafter water and mulch as needed.
3. Light shade, airy and open, gives best results. Only certain trees will do. The best are Oaks, Cherries, Magnolias and Birch. Their leaves make the best mulch. Avoid Beech and Maple.

Young Rhododendron on own Roots

Slower start, but more vigor in after life than grafted plants. Hardier, denser, bushier, healthier —hence longer lived. Plants thoroughly hardened, one year transplants. You will note some very rare kinds. Unitsof 10 plants for \$22.00 (any variety in list below) are offered packed f.o.b. New Jersey. Mixed varieties as you wish. Plants are 5 to 10 inch stems, sturdy. Grown specially for us by Mr. Warren Baldsiefen.

America—Neat growth, good red. Needs little pruning to shape.

Boule de Niede—Dwarf, large dark leaf, large white blooms.

Catawbiense Grandiflorum—Fine rosy lilac. Zone V.

NAMED HYBRIDS IN QUANTITY

Hybrids in quantity, where color is not important, can be planted less expensively by using the seedling plants offered on this page. However, **named hybrids**, from outdoor beds, furnished with a small peat ball ready for immediate planting can be had without too great cost:

Our selection, all good named kinds, from 7 to 12 inch, depending on habits of growth, now two years from grafting: (We promise 50% reds in selecting) \$27.50 for 10, 25 or more \$2.50 each (\$250 00 per 100.)

AN EVERGREEN has leaves all winter, ready to do their work if the day chances to be warm enough. For this reason **extra water** must be given all newly-planted evergreens. Twice a week for a month. Evergreen roots contain resinous sap which hardens after exposure to the air for no longer than two or three minutes.

SPACING EVERGREENS. Evergreens are so very long-lived that what is correct in youth is crowded after 25 years. Generally speaking, plants from 12 to 36 inches should be spaced 3 feet apart and rearranged at the end of 5 to 10 years.

DELIVERY COSTS. Prices include packing only on small, bare-root sizes. On sizes marked "B&B", boxing is usually about 10% of the price additional. Express on small sizes is low (10 to 15%)—but on plants B&B it is about 30 to 40%.

EVERGREENS GROW FAST —

Large evergreens frequently are stunted by the shock of transplanting. One customer writes: "My neighbor paid \$30 apiece for 12-foot specimen Red Pine; I bought 18-inch XX (no earth ball) the same year. Today (12 years later) my trees are larger than his!" Here are some average rates of growth (inches per year).*

Abies concolor	9	Pinus cembra	6
—douglasi	15	—mughus	7
Juniper Pfitzer	15	—nigra	11
—Sargent	10	—sylvestris	15

Special Hemlock Offer

Hemlocks naturally make compact root systems if grown in soft humus. We have collecting rights on an area in North Carolina where they grow in this manner and can dig nice shapely young plants with a ball of earth (B&B) that will give satisfaction and grow into fine specimens. Express runs about 15 cents a plant, paid on arrival. Two kinds.

TSUGA canadensis (Northern)

TSUGA carolina (Carolina)

* = young, unformed. X = transplanted. B&B = ball of earth. Shapely. Plants not marked: well shaped.

HANDSOME DECIDUOUS TREES

On the next 8 pages is an alphabetical list of deciduous trees — the better kinds only. Many sorts not listed can be quoted on request. Small, bushy trees are included in this list, though some of them come close to being shrubs (there is no clear dividing line). We try to simplify, e.g., all Maples, even dwarf forms, are here — while all Viburnums, even tree-like kinds, are listed as shrubs.

TREES GROW QUICKLY

Since a young tree requires little care, and is much less expensive and trouble to plant than a large one, it pays to plan ahead. A special list of bargains for such use is made on Page 11. *Ulmus pumila* Poplars and Willows are famous for rapid growth—but among “slow” trees known to have reached 30 feet or more in their first 15 years of life are Red Oak, Pin Oak, most Maples, *Liriodendron*, several Birches, Black Locust and American Linden.

PLANTING SMALL SHRUBS

LARGER SIZES

Shrubs that take care of themselves are marked in the tables below with a "†". These literally gain no improvement whatever from cultivation — plant 'em and forget 'em! Some are very beautiful indeed.

MOST SHRUBS

Bloom young, usually in second year. But after ten years they need 6 feet of space for best appearance. So plant 3 feet apart and arrange that every second shrub can be removed in later years. (Dwarf shrubs take just half this spacing.) Shrubs grow quickly, so small sizes (see Page 44 for some special offers) are practical for mass effects. Most kinds are in the table below and described and priced in following pages.

We price two general sizes:—One marked * which is small not well shaped (but will quickly grow so) and one not marked * which is fully shaped for a young plant. The larger size we will sell one or more; the smaller cannot be sold in less quantity than catalogued—one must buy 5 (10 rate) or 50 (100 rate).

PRUNING SHRUBS—Flowers come on old wood, so the rule is to prune when in bloom or just afterward. Thus no potential bloom is lost. Natural shrub shape is to have many main stems in a clump all ascending from the ground, so prune out old branches completely at the ground line thus encouraging plenty of new vigorous shoots. Branches in flower can be taken for house decoration at the time of pruning.

A BELIOPHYLLUM distichum (White "Forsythia"). Zone V. 3½ ft. White Apr. Drain, sun. 6-in. pot\$8.50 each, 3 \$24.00

EVERBLOOMING PILLAR ROSES

This new race is really revolutionary. A combination of HT's and ordinary climbers never before obtained. Beautiful large HT blooms all summer. Sub-zero hardiness. Bloom at ends of all stems the same year they grow. Red, Pink, apricot, yellow, white in various shades. Not yet named, sold only our selection of colors (one each color) 3 for \$10. 6 for \$20. If only one desired, price is \$4 each.

They grow sturdy like climbers, but not so high. May be kept cut back as giant bush form Hybrid Teas, or as specimen self-supported bushes 5 to 8 feet tall —something that only tropical gardens hitherto have been able to show.

The result of more than a decade of research, this new race of roses adds to unusual hardiness a character of improving with age, rather than slowly deteriorating as most hybrid teas do. They are exceptionally easy to grow and bring into bloom. Disease-resistant, unusually hardy.

HARDINESS: About Zone IV, but roots will survive still colder climates and even if tops damaged, new growth will be ready to bloom by rose time. Tops protected by hilling or burlap seldom kill back. Any plant that fails to bloom in 2 yrs. replaced free in U. S. A.

New Class! Grandifloras

This class, like Floribundas but with vigor and blooms like Hybrid Teas, is now made to order to fit these favorite Brownell varieties:—

★ **Pink Princess.** Bud red, flower deep pink. Free from premature defoliation. Blooms all summer.

Anne Vanderbilt. Exquisite coppery orange, red, informal, semi-double, brilliant, fragrant. All summer.

★ **Laffer.** Sparkling orange and yellow, semi-double.

Lily Pons. Cream, large. Vigorous, free

Curly Pink. Clusters of large two-toned pink all summer. Vigor, health, and constancy.

★ **Red Duchess.** Robust sturdy large red. Outstanding fragrance. Grand new rose. Brilliant, attractive, free to flower. This fine new red has attracted instant friends wherever seen in the past year. All the color and size you could want but extra hardy!

★ **Dolly Darling.** Pink, sunset and rose blend. Extra vigor and health. New.

Queen o' the Lakes. Sensational large crimson. New.

4 Brownell Floribundas

Everblooming, hardy, bushy clumps.

☆ **Pink Bouquet.** Vigorous double pink. **Tomkins Red.** Semi-double, velvet red all summer.

★ **Orange Ruffels.** Sensational new color in roses. Glowing, soft luminous. Very steady bloomer all summer. Large flowers.

★ **Yellow Ruffels.** Similar, but a good non-fading yellow.

4 Brownell Creepers

For ground cover, on walls, on fences.

Coral Creeper. All the shades of ocean coral complementing other delightful rose tints. (June).

Little Compton Creeper. Deep rose-pink. Single. Clusters.

Red Creeping Everbloom. Crimson. All-summer creeper.

Magic Carpet. Large, double blooms, yellow and orange.

3 Brownell Climbers

Vigorous, extra hardy, vivid.

Elegance. Very large, perfect blooms. White with shaded yellow center. Grand show.

VINES

These plants are really shrubs that climb; plant just like shrubs (see Page 32). Evergreen kinds are treated like broadleaf evergreens (Page 7). Vines and plants for Ground Covers are on Page 42.

Their climbing habits vary: Some need tying, others will twine if supports are available, others cling or root to rough surfaces without support. All are tolerant, those marked * in table need no care at all.

JASMINUM nudiflorum (Winter Jasmine). 15 ft. Zone V. Bright yellow, Feb. to April. Tolerant.

A Permanent Lawn Ground-Cover—at last!

ZOYSIA

MEYER
Z-52

Plant This

Cut or scrape a small trench every 10 inches across your area. (Leave 5 inches space between runners in the row.) Plant root-runners, water frequently.

In six months you have a solid lawn, then stop watering for good. One bag does 500 sq. ft. Or economize: Plant a nursery area 20 x 25 ft. After 6 months cut the solid turf into 2-inch strips and plant the strips 8 inches apart. Thus you cover 3000 sq. ft. with one \$12 bag.

And Get This

Zoysia Meyer Z-52 makes a good lawn. Medium fine, very dense. You can be proud of one. Brown in winter, but green through summer drought.

It needs sun or very light shade. Resists drought beyond anything known in other neat lawns. Fine in hot south, but is hardy to Zone IV, although slower growing there. (Best plant only 6 inches apart in Zone IV.)

Kills out crab-grass in open competition. Tolerant of poor soil — fine for seashore lawns. Disease and insect free. Toughest turf known; trampling does no harm. 100% guarantee to grow the first year.

Best planted in warm weather, May, June or even July.

Price, postpaid and guaranteed per bag of about 400 linear feet \$12. (10 bags or more, 10% discount.)

Photo: Vinca Minor

VINCA (The Myrtle)

The most satisfactory, showy, trouble-free of all ground covers. The leaf is small, shiny, dark green all year round. Even in full shade, the leaves grow thickly. It spreads by underground roots. To be sure of coverage within (say) 2 years, we recommend spacing 12 in. apart. There are blue flowers, showy and cheerful, all spring. Will grow and thrive in any soil. **Planting —Clumps come tied compactly. Untie and spread out.**

Prevent Erosion on
Steep Banks

Steep slopes can be put into grass and mowed. But it is constant work and worry. The following plants do the job better. There are almost no maintenance problems.

Eventually one plant will cover a large area, but on banks it is important to get the soil held quickly. We suggest bad steeps be planted 10 inches apart each way — gentler slopes 1 foot, except as noted on descriptions.

Many plants can be made into hedges, including Privets and barberry (priced on page 12) but Hemlock and Yew are far the best of all. The XX sizes of hemlock can be put in hedge row — smaller should be bedded two years first.

PRUNING HEDGES

HEMLOCK HEDGE properly sheared gives a fine, even, smooth dark green surface unlike any other hedge. Thrives in soils ranging from ordinary to damp, and from full sun to full shade. Set plants 1½ feet apart.

For any and every purpose in which Evergreens are required the Yew can be recommended. Hardy in New England and Ontario, immune to most diseases and pests. Accommodating to an extraordinary degree, withstanding shade or full sunshine.

Hedges Must Grow. An inch a year is enough—more if desired. When a hedge is too large, prune severely and then let soft new growth come back. Fertilize. You have to prune all the more, but you have a nice hedge!

Experts agree that perfect hedges should be started from one to two feet high.

The Upright Yew Hedge grew from the planting at left in 8 years.

Roads and Driveways Planted Cheaply

The special size below costs much less than larger specimen trees, but also can be planted with little more than a tenth the time and labor. Yet the planting when finished is large enough to show readily, and avoids some of the waiting of real "baby" sizes offered on the next page.

A hole a foot deep and wide will be ample in most cases. Note the pruning of the tree to a single stick. This should be done on planting.

BARGAINS IN LARGER YOUNG TREES

Those who want quick results yet not have to pay for full specimens can here select from the best kinds of trees at enormous savings. We offer nice, well-rooted, transplanted stock between 4 and 8 feet high. They are young and transplant more easily and grow more vigorously than older stock. Yet you save 2 to 4 years over small seedling sizes at little extra cost. Packing included if cash accompanies your order. 5 of one kind at 10 rate, 50 at 100 rate.

PLANTING YOUNG TREES and SHRUBS SAFELY

PLANTING—The first thing is to keep the package moist. Only when the planting bed is ready do you open it, and even then remove only one plant at a time from its wrapping to plant it. This is particularly important with evergreens, but good sense with all plants. The quicker the better — twenty seconds per plant is average.

SOIL should be loose and friable, and absolutely must contain some humus. Add peat moss if necessary.

SHADE must be provided for newly planted young evergreens. Usually only for the first summer, but very young ones need it for two. Deciduous trees, shrubs, vines need none.

WATER is usually critical the first week or two. Soak thoroughly when planting. Then again the next day. After that not oftener than twice a week. But you can spray the leaves a few seconds at a time if the weather turns hot.

PRUNING is usually essential. Prune freely. Never cut a new plant to the ground, but to a 2 or 3-inch stub is all right. Don't fear to "lose" so much top — in a year you'll get it back — and more, and bushier — than if you didn't prune. (Upright growing evergreens, of course, must never have their tops cut — you trim the sides.)

"S" EVERGREEN SEEDLINGS

Should be planted about four inches apart in beds, shaded by a lath screen

"X"—TRANSPLANTS

Evergreens that have been moved, or root-pruned, form compact fibrous roots. Need less shade.

Photos: Spruce seedling and transplants. Note the much larger roots at right — twice transplanted.

Bargains in LARGER YOUNG EVERGREENS

"XX" Twice transplanted, 5 to 7 years old, practically landscape specimens, except not balled. So express is little, about 10% extra on arrival. Roots in damp moss, safe, easy planting. Real bargain these days, when B&B evergreens cost 50% extra for express! For culture see page 5, item "C".

ROOTS are the important part of a small evergreen. You can't see them, looking at the plants growing. But you can specify "twice transplanted."

EVERGREENS *at special* QUANTITY PRICES

SMALL trees, cheap to buy and plant, can be handled in large quantities by the average landowner. Those who wish merely to reforest can obtain from forest nurseries (state owned) very low prices indeed—for lower than the same could be produced by us on a commercial basis and figuring in all costs, including taxes. Lumber values will never again fall to the low levels of 20 years ago. There is a reasonably sure profit. There are certain restrictions on the use of your land if you use these

government trees.

But not only for profit do men plant trees. There is fun and beauty in them—and health. An empty acre produces nothing; a planted one is handsome, fun to watch as the trees grow, and carries the comforting thought that you are doing something useful for your country as well as your pocketbook. Moreover, there are no restrictions as to what kinds you shall plant, nor what you shall use our trees for.

How and Why of
Better Gardening
(Manning)

Thousands of gardeners have found this basic book of "more real help than a shelf of cyclopedias." "Exciting as a novel," "certainly no other book exists like it." If you have been confused by the complex rules and instructions in ordinary garden books, you will find here quick, sure enlightenment. Yet expert gardeners, even more than beginners, are writing about this book's surprising usefulness. "Pays for itself ten times over."

\$4.00 postpaid

The Book of Trees (Hottes).

FERTO - POTS

Ferto-Pots are manufactured from a rich rotted cow manure mixture in automatic pot machines and then kiln dried. The pots soften up only in moist soil after planting out after seedlings are big enough. Start your seeds, seedling plants, cuttings, bulbs, etc., in Ferto-Pots and insure quicker, better results; no wilt, no setback in transplanting. Pot goes into the ground without disturbance or shock to the root system and continues to feed the growing plant. (Postpaid)—2-in. diameter, 100 for \$2.75; 2 1/2-in. diameter, 100 for \$3.00; 3-in. diameter, 100 for \$3.50.

SPACING FRUIT

Apple, Standard	30 by 30 ft.
Apple, Dwarf	10 by 10 ft.
Cherry	25 by 25 ft.
Peach or Plum	20 by 20 ft.
Pear, Standard	25 by 25 ft.
Apricot	12 by 12 ft.
Raspberry	2 by 4 ft.
Grape	8 by 10 ft.
Blueberry	4 by 6 ft.
Chestnut	30 by 30 ft.
Walnut	40 by 40 ft.

Fruit trees are planted like any other deciduous tree. (p. 23.) Most need some care, but those most labor-saving include: Crab-apples, Bush-cherry, Blueberry; Blackberry, nut trees and (in regular fruit) the dwarfed forms rather than the standard trees. An orchard so planted can be less than half as much work and expense.

SELF-STERILE FRUITS

Many fruits do not bear good crops if planted separately. Pollen from nearby trees of different variety is often needed. Noted on these pages by:

*—self-unfruitful. Do not plant by itself, but always with another variety of the same fruit.

(P)—good pollinizer.

Huge Hybrid Blueberries

Really beautiful as specimens or in hedges. Suited for use in small quantities in the small garden. A 100-foot hedge will pay about \$25 worth of berries a year! (Spaced 18 ins.)

Why Wait? Plant Some NOW!

And enjoy the berries sooner. Not only will they add to your garden but will pay back cost many times over! Hardy throughout U.S.A.

18 to 24 inch	—	16.00	35.00

Jersey. Large, vigorous. Hardest. Early July.
Atlantic. Extra large, vigorous; late.
Rancocoas. Early, good quality.
Pemberton. Large, mild and bland.
June. Erect bush. Early. Dark blue berries.
Burlington. Large, latest of all.
Rubel. Tall grower, erect. Late.
Dixie. Huge. High flavor.
Weymouth. Earliest of all. Best for cooking.

BLUEBERRY CULTURE

Set the plants in beds 4 feet apart each way. Several varieties should be included in every planting, as an exchange of pollen is necessary to produce good crops of berries. Or order "mixed" if you wish — we will assort for good pollenization.

You will get fruit if you just leave 'em alone. But more and larger if you cut out all old canes, and keep new shoots coming. Also when in bloom cut away about half each flower cluster. Fertilize in May.

Blueberries require an acid soil containing peat or other rotted vegetable matter. They need a moderate supply of soil-moisture, and good drainage so that the roots can get air during the growing season.

Photo: Dwarf Apples bear heavily.

(Below): Espaliers often bear first year.

Ten to twelve feet is the maximum height to which true dwarf Espaliers will grow. Little pruning is needed—beyond keeping the small new spurs from reaching more than six inches outside of the main stems. When a spur has borne it will continue to bear. Pick the stem with the fruit.

In planting against a wall, place the tree six inches away and allow 18 inches root space—requiring a space in all two feet out from the wall.

Dwarf Fruit Trees

Available in All Varieties on Next Page.

A tree whose fruit is as large or larger than ordinary, but which never grows very tall—perhaps ultimately 12 to 15 feet. Space 12 ft apart.

A dwarfed tree can be sprayed, pruned and picked by hand without ladders, equipment or professional skill. It bears much earlier in life, in its third or fourth year at latest—often earlier—and carries amazing loads of fruit. Dwarfed fruits (especially Plums and Peach) are less liable to borers and other pests.

PRICES: All kinds listed below:
(50c packing on orders under \$10.00)

- 1 year—Not branches\$2.60
- 2 year—Branched 3.90
- 3 year—Heavier 5.25

All three ages are about the same height. Most are 3 to 4 feet high, but apples often are still dwarfed. If extra dwarf apples wanted, specify Malling 9.

Planting Depth should be so that the graft is just above the ground or an inch above. If too deep the scion develops its own roots and tree is no longer dwarf. If too high, rootstock suckers.

NUT TREES

There are good nuts to be grown in the north. Chestnuts from seed are young, heavy bearers. The grafted Walnuts are hardier and also bear heavily and young. The first two years mulch well with hay or straw. Water if drought comes. Do not plant deeper than they were in nursery.

BLACK WALNUTS—Zone IV

One of our most beautiful native trees, growing well in any fertile well drained soil. The grafted sorts bear their first nuts commonly in the third to fifth year. **Thomas** is a rapid-growing tree. The meat is attractive and tasty, falls out easily in halves.

2 to 3 ft.\$2.50 each, 3 for \$11.25

Grafted English Walnut

Grafted on black walnut roots, it becomes hardy in Zone V, can be grown safely, fruited easily.

New Hybrid Grapes

High quality grapes on far less vigorous (and less troublesome) vines.

No permanent canes needed; only a short trunk or shank. Grapes grow on new wood, which is pruned away each year.

Most kinds bear about Concord time. Bacco, Florence, Angele are perhaps two weeks earlier. Siebel 14 and Jacques wolf, a week later.

The European Grape (*Vitis vinifera*) is far superior to our native grapes. However, it has not the stamina to withstand sub-zero weather and succumbs disastrously to disease, while our hardy native grapes remain immune.

Breeders have produced varieties that combine the best qualities of both species to produce the ideal grape vine: namely, resiliency to our cold climate and diseases; absence of all foxiness, as with the old Concord. These Hybrid Grapes possess a pleasant sweetness and a certain native fruitiness, that makes them in many respects far superior to the California as either fine table or excellent wine grapes.

They lend themselves to Spur pruning. This quality simplifies the pruning and care of the vines and permits one to easily train them into permanent pleasing patterns. They can be grown even on a six foot pole, to produce from 10 to 30 pounds of luscious grapes. The clusters are of immense size, some of the varieties have as many as 150 big clusters the second year planted.

Grape Culture calls for plenty of humus in the soil. Old manure is far the best form, to produce vigorous spring growth. Extra moisture is needed as fruits fatten in summer. Otherwise grapes may be small, dry.

STEBEN (Blue-Black)

(N. Y. State Experiment Station)

Exquisite flavor. Melting, tender, sweet. Grows huge, perfectly formed, long slender clusters. Fruit is of outstanding quality, and the vine very hardy. (Zone IV. No spraying necessary—it is absolutely free from rot and mildew. Ripens a few days before Concord, but keeps well until Christmas. The greatest blue Grape ever grown. Supply limited—order early.

MODERN HARDY HERBACEOUS PERENNIALS

PAGES 54 TO 61

On these six pages is packed more information and variety than in many a large perennial catalog. Strong, sturdy field-grown clumps are offered, except for kinds that do best in pots. Perennials are not shipped until late April and May as a rule, but **ORDER NOW**. We'll ship at the right time. Add 35¢ handling on perennial orders under \$2.50, otherwise all prices postpaid East of the Rockies.

PERENNIALS last for years in the ground. One plant in New England has been recorded at four generations.

HARDINESS is sufficient to grow most kinds up to Zone IV. Extra hardy sorts include: *Aquilegia*, *Campanulas*, *Dianthus*, *Delphinium*, *Hemerocallis*, *Iris*, *Lilium*, *Peony*, *Phlox*.

ROOT CLUMPS. Most perennials come as sketched above. Work the loose earth well in among the roots; spread roots gently to allow this. Water well to settle. If growth has started, shade from direct sun first few days.

3 of one kind \$2.25

Purple and Gold — double, free-blooming, large.

Mahogany—dark red.

Kagari Bi—rose-pink.

Gold Bound — huge white.

TREE PEONIES

\$5.50 each (ppd.)

Because of their novelty and great beauty, Tree Peonies are rapidly becoming one of the most desired plants. They bloom earlier than ordinary Chinese Peonies and their flowers are of immense size. (5-inch pots, 2-years old.)

J. Pirlet—globe, carmine-pink, double.

Flora—immense, white, single.

Aurore—single terra-cotta.

Argosy—single bright yellow.

Flambeau—double salmon-red.

Satin Rouge—double blood-orange.

Sour. de Ducher—double, red-violet.

Lorraine—large salmon yellow.

Hardy PHLOX

There are getting to be so many varieties that this rigidly critical list will be helpful to many.

Decussata (Summer Phlox)

July to October. Space 10 inches, sun, drained, fertilized. Never water foliage. Fine new kinds, any one kind—

3 for \$1.90, 6 for \$3.50

Africa—Deep carmine red with deeper red eyes. A fine new variety, very large trusses.

Charles Curtis — Sunset-red in large panicles. Brilliant coloring.

Daily Sketch—Very large salmon-pink florets with crimson eye, in large panicles. An outstanding novelty.

Leo Schlagter — Orange scarlet florets in very large trusses, very popular.

Lillian — Beautiful pure pink without magenta. Good panicles of large florets. Healthy growth.

Salmon Glow—Pink, shaded salmon. Large, showy.

R. P. Struthers—Cherry-red.

White Admiral — Pure white large panicles, extra large individual florets. Good grower and a free bloomer. New.

Suffruticosa (Early Phlox)

Sun, drain, space 10 inches.

Miss Lingard—The best early white known. June to October. 3 for \$2.00, 6 for \$3.90

Setacea (Cushion Phlox)

Compact, neater than subulata, blooms both spring and again heavily in Autumn. Sun, drain.

Camla—Pure glistening pink. 3 for \$2.25, 6 for \$4.25

Subulata (Moss Pink)

A low spreading mat for full sun in drained soil. Bloom April and May. Any one kind—

3 for \$2.00, 6 for \$3.90

Atropurpurea—Showy red.

Vivid—Attractive pink, red eye.

Alba—Pure white.

Phlox decussata in July

PERENNIALS

Dianthus Hardy "Carnations"

Christmas Rose

Christmas Rose

Handsome, but much over-rated in current popular advertising. But a fine small plant.

Helleborus Niger. Tiny ever-green, with white blooms. December to March. 3 for \$6.00.

Lily of the Valley

Convallaria majalis. These are rooted clumps, ready to bloom, not mere "pips". Fragrant, white sprays in May. Rich soil, in shade. 3 for \$2.50; 10, \$8.00.

Hardy "Carnations"

Dianthus that look and smell like florists' carnations. Hardy. Blooms all summer.

June Carmine—rose

Old Spice—salmon-pink

Any one kind:—

PLANNING A PERENNIAL BED

The first step is to run through the lists; jot down all kinds that will grow on your location. After each name mark height—low, medium or tall. Group the names in three lots—late, early and all-season bloomers.

Begin with the favorite flower: In the sunny border at left, Delphinium: Tall, late; space 12 inches. On paper marked in foot squares draw three square feet (any shape) and write 3 Delphinium. (This is minimum, fewer make no show.) Now the late garden is established as blue. A companion plant is all-season Aster Frikart. Heighten the early blue with Anchusa. Yellow is a fine complementary. Put Chrysanthemums and other yellow plants in front. For each, the planting distance is carefully drawn. Change with the eraser until you get it to suit available space. The shade border: Here the favorite plant is Aquilegia (Columbine) and the whole garden matches them, with the blazing Astilbe for early flash. Later, on the left is a white, with a rose behind it and orange beyond.

SHADE PERENNIAL BORDER—Some showy yet labor-saving plants for such a position are:—Beardless Iris, Day-Lily, Lillies, Liatris, Lythrum, Mertensia, Tradescantia, Aquilegia, Digitalis, Ladies-Slippers, Campanula carpatica and Astilbe Fanal.

Wild Flowers

Lady-Slippers, Trillium Bloodroot, Jack-in-Pulpit, Blue-Bells, and early spring bloomers can be shipped only in fall.

Success with wild flowers is simply a matter of putting them in the soil, exposure and general climate to which they are accustomed. It is important to arrange gardens where associated plants are grouped, rather than try to make artificial differences of soil in the same bed. Coddling is apt to do more harm than good.

Columbine

Aquilegia canadensis—2 ft. Red and yellow in late spring. Well-drained, sun or part shade. 5 for \$1.75 postpaid.

Butterflyweed

Asclepias tuberosa — 18 inch. Orange in June-July. Sunny, well-drained. 3 for \$1.60, 6 for \$3.00 postpaid.

Poppy Mallow

Callirhoe involucrata — Prostrate, trailing plant. Large rosy crimson flowers all summer and early fall. Dry, sunny. 3 for \$1.85, 6 for \$3.50 postpaid.

White Bugbane

Cimifuga racemosa—4 ft. Spikes of white, July-August. Stands shade. 5 for \$2.00 postpaid.

Plumy Bleeding-heart

Dicentra eximia — 12 inch. Rose pink throughout summer. Handsome cut foliage. Sun or shade. 3 for \$1.95, 6 for \$3.75 postpaid.

Shooting Star

Dodecatheon media—12 inch. Pink, April to May. Rosettes of large green leaves. Light moist soil, some shade. 5 for \$2.00 postpaid.

Cardinal Flower

Lobelia cardinalis—4 ft. Tall spikes of most brilliant scarlet in August. Rich, moist soil. 5 for \$1.75 postpaid.

Liverleaf Hepatica

Hepatica triloba—6 inch. Flowers vary from pink to blue-white, early spring. Acid, shade. 5 for \$2.00 postpaid.

Evening Primrose

Oenothera missouriensis — Dwarf, covered with yellow blooms all summer. 3 for \$1.85, 6 for \$3.50.

Great Solomons Seal

Polygonatum commutatum — 30 inches. White flowers in May. Handsome leaf. Peat, light shade. 5 for \$2.00 postpaid.

Carolina Lupine

Thermopsis caroliniana — 3 feet. Spikes of yellow pea-flowers in June-July. 3 for \$1.95, 6 for \$3.75 postpaid.

Blind Gentian

Gentiana Andrewsii — 12 inch. Bright blue, large flowers in clusters, August-September, that never open. Handsome, rare, moist soil. 5 for \$1.75 postpaid.

Coral Bells

Native to the West and South-West, handsome low leaves, with tall panicles of bloom nearly all summer. Ordinary soil. Any one kind, 3 for \$1.95, 6 for \$3.75.

Heuchera brizoides (lithophila)—2 ft., pale rose pink. Strong grower. —*sanquinea*—15 inch. Bright coral red.

Native Phlox

Phlox divaricata—masses of Lavender blue, April to June. 10 inch. 3 for \$1.95, 6 for \$3.75.

Blazing Star

Liatris pycnostachya — 5 ft. Tall spikes of rich purple in August-September. Unusual and attractive. Well-drained soil. 3 for \$1.75, 6 for \$3.00 postpaid.

Wild Iris

Iris cristata (crested)—8 inch blue, creeping. 6 for \$1.50 postpaid.

Native Azaleas

These, totally unlike the garden azaleas offered on page 8, must not be cultivated. A woody site, with lots of leaf-mold, and half shade is ideal. A piece of natural woodland is often suitable.

Calendulacea—Flame, May. Zone V.

Viscosa—White, June. Zone III. Any one of above, 12-15 inch clumps B&B at \$14.00 for 10, \$120.00 per 100.

Kalmia latifolia. (Mt. Laurel) Pink-white, June, Zone III. 8 ft.

Leucothoe cateshaei White, May, Zone V, spreads. 4 ft.

Phododendron catawbiense Purple, June, Zone IV, to 10 ft.

Rhododendron carolina Pink, May, Zone V, to 8 ft.

NATIVE

Aristocrats

The five flowering evergreen shrubs on this page are shipped from the mountains of North Carolina. Cold winters there makes them hardy. They are dug from natural growth in the open (not in woods) hence will succeed in normal garden conditions. Great care in digging, handling and packing has resulted in outstanding success in our customers' gardens—as good or better results than from plants cultivated in nursery rows for these kinds. Never fertilize, nor cultivate. Plant in acid peaty soil, mulch with dead leaves, prune as you may wish, then leave them alone.

Rhododendrons low as 37½¢, in few years, little care, will be bushy \$10 specimens.

SIZE 1: Small as Ships Safely

12-inch Seedlings (1 Stem) with a Small Ball.

This special "Young Aristocrat" grade measures about 12 inches dug with a little earth left on roots, but not burlapped. Plants weigh about one pound only. This stock is not to be compared for a minute with ordinary collected plants. It is on the contrary all carefully dug, the greatest pains being taken to preserve the roots. Carefully packed, it is easily planted and makes a quick start. Shipped from North Carolina, express runs only 8¢ each (in 100 lots).

SIZE 2: As Small as Looks Shapely.

8 to 12 in. B&B. Clumps, 4 to 6 Stems.

These "Junior Specimens" weigh about 3 to 5 pounds per plant, individually burlapped. They are 2 years older than Size 1. Express runs about 25 cents per plant. You can expect some blooms the year after planting. These really "look like something" the day they are planted.

OFFER D

5 each of above, 25 plants, for \$30 express about \$5).

SIZE 3: Bushy Clumps 1½ to 2 Feet.

Most are budded for at least some immediate bloom. Large enough to use at once for foundations, shrub borders. Allow about 3 ft. space, which they will fill within next few years. \$4.50 each, singly.

Any five of the 5 kinds pictured here for \$16.75. (Express costs about \$5.00 for the 5 due to heavy earth balls.)

SIZE 4: Extra Large Clumps.

These are designed to give our customers an immediate effect for the least cost. Three kinds only:—

Rhododendron maximum 3-4 ft. B&B

Rhododendron catawbiense 2-3 ft. B&B

Mountain Laurel 3 to 4 ft. B&B

Sold only in boxes of 4 (assorted as you wish) 4 for \$22.50. (Express about \$5 for the box of 4.)
